

Eco Tourism Resort

- **Couran Cove QLD Australia**
- A Flovac vacuum system was chosen due to an EPA request to avoid any damage to the local Fauna. Shallow excavation and flexible piping meant that the local environment was not disturbed during excavation.
- The client was also very conscience of avoiding any sewage overflows into the swimming pool and lagoon areas with many of the valves positioned under the boardwalk.
- Monitoring of the valves was included in this project as the manager was looking at a user pay tariff for the bungalows to help reduce water use.
