

Sensitive Fishing Tourist Area

- **Hat Head NSW Australia**
- One of Australia's best known fishing and diving areas as well as a regular spot for whale watching. Overflowing septic tanks were destroying the area and a Flovac vacuum system was chosen due to the low impact of the construction. The Flovac vacuum system was also able to cope with the extreme population fluctuations from winter to summer, from 500 people to 5,000 people.
- The system needed to cope with a busy caravan park with high flows from the shower blocks and very sandy conditions. Annual checks show that no sand remained in the vacuum pits after the valve firing action.
