

# Golf Course Resort

- **Pacific Harbour QLD Australia**
- Condominiums line this prestigious Ross Watson designed course on Bribie Island. A gravity design included 14 gravity pump stations, using up valuable land and lessening the enjoyment of a number of home owners.
- The Flovac vacuum system allowed the developer to stage the infrastructure costs effectively and stage the impact on site during construction. The housing development will be staged over a number of years, depending on house prices in the area.
- The Vacuum pump station could be housed in the golf club precinct to allow for all work sheds to be in one area.
